

TALHA REHMAN

Full-Stack Software Engineer (MERN | PERN | Next.js | React_Native App | n8n Automation)

Islamabad, Pakistan | +92 334 9805663 | talharehmankht@gmail.com

[Portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-stack software engineer with hands-on experience building and shipping production web applications using React.js, Node.js, Express.js, MongoDB, and PostgreSQL. Currently maintain live client products at LiveTalk, and previously delivered three internal products end to end during a six-month internship at Brandora. Recent work includes an ERP-style inventory and operations module built into an LLM-powered pharmacy platform (Final Year Project), a geospatial restaurant-discovery app, and n8n workflows that tie REST APIs, databases, and LLMs together to automate manual processes. Comfortable working with ERP-style business systems and building n8n automation pipelines, and enjoy owning a feature end to end — from API design through UI to deployment — in an Agile team. Available immediately for onsite, remote, or hybrid roles.

TECHNICAL SKILLS

- Languages: JavaScript (ES6+), TypeScript, Python, C++
- Frontend: React.js, Next.js (App Router), Tailwind CSS, HTML5, CSS3, Bootstrap, Framer Motion
- Backend: Node.js, Express.js, REST API Design, JWT & OAuth 2.0, Webhooks
- Databases: MongoDB (Mongoose), PostgreSQL, Supabase (PostGIS), MySQL
- Tools & Platforms: Git, GitHub, Postman, Vercel, Vite, n8n
- AI & Automation: LLM Integration (Gemini API), AI Chatbots, Prompt Engineering, n8n AI Workflow Orchestration, Agentic AI (in progress)
- Core Concepts: Full-Stack Development, Authentication & Authorization, CRUD Systems, API Integration, Responsive Design, Agile Development, Debugging & Production Support

PROFESSIONAL EXPERIENCE

Junior Software Engineer — LiveTalk, Pakistan

Oct 2024 – Present

- Maintain and enhance 3 live production web applications — including Salamty, a real-estate listings platform — across React.js, Node.js, Express.js, MongoDB, and PostgreSQL.
- Design and ship REST API endpoints for authentication, user management, and core business workflows, testing and documenting each one in Postman.
- Build responsive, production-ready React interfaces used directly by end clients on both desktop and mobile.
- Automate recurring internal and client-facing processes with n8n workflows that connect REST APIs, databases, and LLM nodes, cutting down manual work each week.
- Debug and resolve production issues across the stack, reducing recurring bug reports and improving stability release over release.
- Collaborate with senior developers in an Agile workflow, from feature planning through deployment.

Full-Stack Developer (Internship) — Brandora, Pakistan

Apr 2024 – Oct 2024

- Delivered 3 full-stack MERN products from the ground up over a six-month internship.
- Built Brandora's official corporate website end to end, from frontend UI through backend integration and deployment.
- Designed and developed an Attendance and Task Tracking System used daily by internal staff to log attendance and manage task assignments.
- Built "ChorPolice," an interactive multiplayer employee-engagement web game, implementing the game logic and a responsive UI.
- Worked directly with senior engineers under production-quality coding and code-review practices.

PROJECTS

Zaiqa — Taste-Based Restaurant Discovery Platform — React, Vite, Tailwind, Supabase (PostgreSQL + PostGIS), MongoDB Atlas

- Built and deployed a solo full-stack product that recommends restaurants across major Pakistani cities based on a short taste-preference survey.
- Implemented a cosine-similarity matching engine that scores each user's taste profile against restaurant flavour profiles to rank results.
- Used PostGIS geospatial queries with the Geoapify API and Leaflet to rank and map recommendations by proximity to the user.
- Secured the platform with JWT authentication and Google OAuth; deployed the full stack to Vercel.

AI-Integrated Pharmacy Management System — Final Year Project — React, Tailwind, Flutter, Supabase (PostgreSQL), Gemini API

- Built a dual-interface platform: a React web dashboard for pharmacy staff and a Flutter mobile app for customers, sharing one Supabase backend.
- Implemented full CRUD inventory management with expiry tracking and automated restock and expiry reminders.
- Integrated the Gemini API for medicine price prediction, an alternative-medicine recommendation engine, and a prescription-guidance module that turns prescriptions into personalized medication schedules.
- Designed the inventory, stock, and reminder workflow as an ERP-style module — the same core patterns (stock tracking, reorder triggers, role-based dashboards) used in small-business ERP systems.

JobHunting — AI-Automated Job Application Tracker — MERN, n8n, Gemini API, SMTP

- Built an application tracker where each new submission fires a webhook into an n8n workflow, using a fire-and-forget pattern so the user-facing request stays fast.
- Designed the workflow to draft a tailored acknowledgement email with Gemini and send it over SMTP, with all secrets held in n8n credentials rather than application code.
- Added a scheduled-trigger branch to handle multi-day follow-up reminders without long-running server processes.

QuickGPT — AI Chatbot Client — React.js, AI APIs

- Built an AI-powered chatbot client demonstrating LLM integration and modern frontend architecture.

AI Hairstyle Try-On / Recommender — React.js, AI/ML APIs

- Built an AI-powered web app that lets users try on or get recommended hairstyles based on their photo, exploring image-based ML APIs on the frontend.

VirtualR — VR / 3D Web Experience — React.js, 3D/VR Web Technologies

- Built an interactive VR/3D web experience, exploring immersive UI patterns and 3D rendering in the browser outside typical CRUD-app work.

Shop-It — E-Commerce Platform — MERN Stack

- Built a full e-commerce site with user authentication, product catalog, and cart/checkout flow.

Additional projects: Grocify (grocery ordering) and Yoga Studio (responsive business site) — source available on [GitHub](#).

EDUCATION

Bachelor of Science in Computer Science (BSCS) — Expected 2026

Kohat University of Science and Technology (KUST) | CGPA: 3.20 / 4.0

ADDITIONAL INFORMATION

- Available immediately for onsite, remote, or hybrid roles in Islamabad / Rawalpindi; open to relocation within Pakistan or abroad.
- Actively expanding into Next.js (App Router), agentic AI, and LLM-integrated tooling through self-directed project work.
